DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-7,9-18,20-31,39-41,45-60 and 66-67, drawn to controlling types of access to a storage device based on drive specific and/or user specific information, classified in class 713, subclass 200.
- II. Claims 32-38, 42-44, and 61-65, drawn to generating a cryptographic key used to encrypt/decrypt data based on the type of access request made to the storage device, classified in class 713, subclass 189.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because no cryptographic key is used to control the operational modes of the computing device. The operational modes of the computing device are based solely on the presence or non-presence of storage device specific information and/or user specific information. The subcombination has separate utility such as encrypting/decrypting data using a cryptographic key generated from specific storage drive information and storage device information. The subcombination

Art Unit: 2137

is configured to automatically allow full access to the storage drives based on the generated type of cryptographic key. In the subcombination, the storage drive always has access to the cryptographic key that was generated in part from its storage device specific information and as such will always have full access (write and read) privileges.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
